

## Release announcement for Teamcenter Medical Device Solution

---

Teamcenter Medical Device Solution from avasis (Industry specific add-on for Teamcenter PLM from Siemens) supports you to ensure the documentation during the whole product development process. The solution speed up the creation of submission documentation while also ensure the completeness of its documentation. Combining all disciplines (Requirements-, Software-, Mechanic-Engineering, RA, QM etc.) in one perspective enables a holistic progress view of the product development process and submission documentation.

### What's new in Version Teamcenter Medical Device Solution 5.0

#### What's New

- Checker & Report functionality in Active Workspace (create simple report view that can be exported to excel)
- Schedule information manageable in Active Workspace (Schedule the Product Development Process)
- Export functionality of submission documentation (whole submission file can be exported to a local file server)
- Multi synchronization of submission documentation (Execute a multi synchronization of the complete submission file, single chapters or multiselected deliverables)
- Schedule Management extension (trigger schedule creation from Teamcenter Medical Device Solution)
- Several small enhancements to provide better usability (refresh status automatically, refresh revision rule automatically, structure change possibility, etc.)

#### Bug Fixes

- When having table with more than 20 lines the view was not properly build
- When being on the Teamcenter Medical Device Solution object in Active workspace and going to home, the view hasn't been refreshed automatically
- When editing data in Rich Client over Wizard sometimes a 500 Communication error occurred

Feel free to get in contact with us for detailed insights, a product demo or in case you have further questions.
