

Announcement: Teamcenter Medical Device Solution

Teamcenter Medical Device Solution from avasis (an industry specific add-on for Teamcenter PLM from Siemens) helps you with documentation during the whole product development process. The solution speeds up the creation of submission documentation while also ensuring completeness. Combining all disciplines (requirements, software, mechanical engineering, RA, QM, etc.) in one place enables a holistic view of your progress in product development and submission documentation.

What's new in Version 5.2 of Teamcenter Medical Device Solution?

New features

- Checker show up also submission including their substructure (full report for holistic project)
- Checker view can be expanded and collapsed (more usability functionality do drill down for user specific needs)
- Deliverables in each phase/milestone can be grouped together (more possibilities to structure a bunch of deliverables to provide a faster overview)
- Schedule Management connector provides schedule creation on DHF or Phase level (independent schedule creation based on DHF, Phase, Template or from scratch)
- Submission template creation based on xml is supported (no business object creation required anymore)

Bug fixes

We apologize for the bugs in Version 5.x.

- AddEntry values/possibilities has not been visualized properly and not the complete list was shown
- Deliverable table on phase/milestone was not showing all deliverables in some cases
- When having unreadable entry in structure, an error was showing up

Would you like to receive a demo of the latest version or do you have questions about the content?
